Hei

Good question. Now you are on a very schematic end of possibilities. On the document I still see this. Might it be possible to try to use AI further to try to get a photorealistic picture of the left-handed system but leave the cogwheels out? Oil cooler is missing. The right hand version is not according to HS technology at all but should be more like your new right-hand version.

I agree that these illustration questions are difficult. We also should agree with the publisher if colored Figs are OK or not

BR Juha

PS I thought that you wanted me to send the first letter to Wiley?

Subject: Re: HS book

Hello Juha,

It is in my to do list. I am just waiting to gather support letters. I will prepare all the figures of Introduction with same style and I will also prepare a kind of rules list about how a figure should be

for the whole book.

P.S. I already updated the geared system figure as given below. Is it still looks too naive?

BR, Hüseyin

Hei

I think the Introduction is close to be sent as a teaser to Wiley

However, the Figs. should follow the same style as the text i.e. same fonts same sizes of fonts. Can you update them?

Then the AI generator Fig. of the geared system is naive. I recommend removing the gears and showing just a box. Or at least the gears should be in the right direction not seen from the front as in the Fig now.

BR Juha
